SUPERVISORY PATENT EXAMINER

Application/Control Number: 09/519,766

Art Unit: 2176

Applicant argues that Malik does not disclose or suggest (1) first means for adding space identification information to specific information for each user associated with the specific access space relative to page information and managing it in correlation with a reference to page information; (2) second means for taking out the first means and adding it to the page information; and (3) third means for replacing the reference included in the page information with the space identification information.

In response, Malik reads-on the limitations as broadly claimed by Applicant. The mapping in the final rejection shows how Malik meets the claim limitations.

Applicant argues that No where does Malik disclose or even suggest registering specific information relative to the page information at the first means.

In response, Malik does teach registering (have been added) specific information (several new selections) related to the page information (the basis bookmark sub-menu)

Applicant argues that Malik does not disclose or suggest an apparatus for providing a specific addressed space that specifies a hypertext space that is in conformance with a purpose of users and wherein a link relation different from an original hypertext space is formed.

In response to applicant's arguments, the recitation "an apparatus for providing a specific addressed space that specifies a hypertext space that is in conformance with a purpose of users and wherein a link relation different from an original hypertext space is formed" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See
